

1. The line graph illustrates how much goods were transported in the UK from 1974 to 2002 by four different modes of transport. ✓

Overall, although road ranked first and rose significantly, it experienced some initial fluctuations. Water and rail started at the same level, with the former rising markedly towards the end and the latter remaining relatively stable while experiencing some fluctuations throughout the period. The figure for pipeline ranked last, showing a gradual increase until the end.

2. The diagram illustrates how much goods ~~was~~ were delivered in the UK from 1974 to 2002 via four ~~various~~ different ways of transport.

Overall, road stood first throughout the period, while pipeline ranked last. ~~Albeit~~ While road, water, and pipeline gradually rose to varying degrees, rail experienced fluctuation.

Commented [ET1]: At 65 words long, this is a very detailed overview. All we need is the OVERALL change:

Road, water and pipeline rose, albeit at different rates, while rail mainly fluctuated.

Add the first rank to this and you have yourself a good overview:

Overall, road ranked first throughout the period, rising along with water and pipeline, albeit at different rates, while rail mainly fluctuated.

Commented [ET2]: VARIOUS is not used with numbers:

4 different ways ✓

4 various ways ×

Commented [ET3]: You can reference the two items you mentioned in the previous sentence:

While they rose along with water, albeit to varying degrees, rail experienced fluctuation.
