

In the future, nobody will buy printed newspapers or books because they will be able to read everything they want online without paying.

To what extent do you agree or disagree with this statement?

Disagree:

Another reason is that **printed books and newspapers provide a more comfortable and distraction-free reading experience**. Unlike digital devices, printed materials do not expose readers to notifications, advertisements or other online distractions, allowing them to concentrate better on what they are reading. > future: people who need to concentrate while reading e.g. ADHD, students, elderly: read on paper

- *This is a paragraph. You were supposed to create notes. Writing a paragraph while thinking of ideas can be distracting and affect both activities.*
- *You have not linked your explanation to the topic. You need to make a prediction based on what you said here. e.g. see the last line of the next idea.*

Screen fatigue and health concerns:

People spend many hours looking at screens

this can cause eye strain and **mental fatigue**

some readers prefer paper for long periods of reading > demand for printed books remains.

- *Not a health concern and irrelevant to your main idea. Replace this with an appropriate health condition.*

Screen fatigue and health concerns: People spend many hours looking at screens > eye strain > headache, dry eyes, poor eyesight, dizziness > future: some readers prefer paper for long periods of reading e.g. students, researchers > demand for printed books/newspapers remains

Should spend enough time on learning a new subject/ **Studying long hours online would be exhausting/**

Due to not having the book available taking notes and summarizing the points would be more challenging and less user friendly/ technical problems and power outage would create some challenges/ productivity will drop/

- *Using "/" to separate your ideas would probably be confusing when it comes to writing your paragraph. You will have to remember all the relationships between them.*
- **Why?**
- *You have not linked your explanation to the topic. You need to make a prediction based on what you said here. e.g. see the last line of the previous idea.*

Printed books are likely to remain for many years -> they do not rely on technology or electricity-> For example, if a server loses its stored data or a country experiences a prolonged power cut, people can still read printed books.

- *This is not a reason for your opinion; it is the opinion itself!*
- *These are current concerns. You need to explain why these issues will still matter in the future.*

Access less affected by technological issues: Printed books/newspapers do not rely on technology or electricity > e.g. if a server loses its stored data or a country experiences a prolonged power cut > people can still read prints + nature of technology & electrical systems: problems/mistakes are always possible even in future > demand for them remains for many years

Some people don't have access to digital devices : people from low income > can not afford smartphones or tablets or computers + **elderly people** or people from remote areas have limited access to digital technology => rely on printed newspapers and books

- *This is about the present time. You need to explain why you think it will be a future issue, as well.*
- *Why don't elderly people have access to technology?*
