

Global warming is one of the most serious issues that the world is facing today. What causes global warming and what measures can governments and individuals take to tackle the issue?

Nowadays, global warming is one of the critical issues facing the world. In this essay, I will outline its causes, as well as the measures that governments and people can take to tackle the issue.✓

~~The excessive use of paper can cause deforestation~~ One of the main causes of global warming is deforestation as a result of the excessive use of paper. Paper is mainly manufactured from wood, so producing large amountss of it requires cutting down trees, which absorb carbon dioxide from the atmosphere. ~~Therefore, cutting them down~~ This increases the amount of CO2 in the air, which contributes to global warming. In addition, ~~industrial factories~~ industries, such as cement, food, plastic, car and textiles, produce large amounts of greenhouse gases, which trap heat in the atmosphere, and consequently the Earth's temperature ~~become~~ higher ~~risers~~ risers.

To tackle the issue, individuals ~~can wear warm clothes at homes~~ should reduce the consumption of fossil fuels. Nowadays, most of them use heating systems in cold seasons.

Since these kinds of systems need to burn fossil fuels, wearing warm clothes can reduce their use and the amount of fossil fuels burned, so ~~fewer~~ smaller amounts of greenhouse gases are released. Furthermore, governments can use their authority to develop electric cars. ~~Since~~

~~these cars use renewable energy, like electricity, t~~hey do not need to burn fossil fuels, as a result of which they reduce the amount of CO2 in the atmosphere.

In conclusion, deforestation due to excessive paper use, and the large amount of pollution produced by industrial factories ~~have a negative impact on~~ contribute to global warming. To address this crucial issue, people can wear warm clothes, such as fleece jackets, at home during cold seasons instead of turning up the heating, and governments can also promote electric cars, ~~which use renewable energy sources, like electricity,~~ which do not release CO2.
