

These days the personal information of many individuals is held by large internet companies and organisations.
Do you think the advantages of this outweigh the disadvantages?

Nowadays large internet companies and organizations hold private information of many

people. I will outline both the benefits and drawbacks of this topic.

On the one hand, ~~some people argue that it is beneficial. Firstly, large internet companies and~~

organizations that know people's personal information can provide ~~personalizes~~ personalized

services, ~~such as more efficient and useful~~ and products. Since they offer a wide variety of

them, customers can choose more easily and quickly and find their favorite items. Secondly, ~~if~~

~~the personal information of many individuals is held by large internet companies and~~

~~organizations, they may~~ companies can attract more ~~people for themselves~~ customers. ~~Holding~~

~~private information have a big influence on their professional development.~~ Since they can

detect different kinds of people's preferences, they are able to produce and advertise special

items for each group of people. Hence, individuals like viewers and customers are attracted,

and consequently, they become more successful and can develop their position in the world.

Commented [ET1]: On the one hand, people have access to personalized services and products. When organizations have their personal information, they can customize their services to match their needs and preferences, and customers can choose more easily and quickly and find their favorite items.

Commented [ET2]: This sentence does nothing to explain the idea that is presented in the sentence before it.

Commented [ET3]: The last two sentences mostly repeat what you had already said in the first idea. There is significant overlap.

On the other hand, holding private information have lots of disadvantages. As far as I am concerned, the most important one is privacy concerns. Nowadays, people are occupied with internet and use it every day for different things, such as sending messages, online purchases, working, and playing. Since people send online information for others, companies and organizations know private information of many individuals, who lose their privacy and feel anxious. Thus, they overthink about privacy concerns. In addition, there is a lack of security on the internet. At present, the usage of online platforms, such as Telegram, Instagram, and WhatsApp are becoming increasingly common and popular, and individuals use them for different kinds of online activities, like sending private and personal photos. Since cyberattacks have become more common, they can access individual's information and take advantage of people.

In conclusion, while some people think that the advantages of this outweigh the disadvantages, I completely disagree with this idea. In my opinion, individuals' privacy is one

of the most essential and crucial issue of life and has a big impact on mental health. Thus,

strict regulations are necessary.
