

Water pollution has become one of the most pressing environmental issues in many parts of the world.

Why is water pollution a growing concern for both individuals and governments?

What measures can be taken to reduce the problem effectively?

In today's world, water pollution has become one of the most critical environmental issues. I

will outline the reasons for this issue, as well as suggest a number of solutions.

~~One reason is that w~~Water pollution has a negative impact on people's physical health, so it

has become a major concern for them. ~~Individuals use water every day, such as for drinking~~

~~and washing clothes.~~ Water plays an essential role in people's their lives, because they ~~should~~

have to drink at least eight glasses of water each day to have healthy skin and become more

relaxed and energetic. If they drink polluted water, they may suffer a variety of illnesses, such

as skin diseases, diarrhea, and stomach problems. In addition, since water pollution causes

high expenses for governments, it has become a critical issue for them. ~~Governments~~ They

play an essential role in meeting people's needs, like offering safe water for ~~people~~ them by

finding technical ways which take a lot of time and effort. ~~Since they need to allocate a large~~

~~budget to water treatment, t~~hey need to find professional experts to achieve better and

more productive results, and use efficient experiments and tools. Therefore, they have to

allocate a large budget to water treatment.

To address the problem, individuals should cause less pollution. Nowadays, most people of them produce a large amount of pollution, especially when they travel. When people they camp in natural places, such as beside rivers and lakes, they litter in them throw their garbage into them. Using plastic bags for collecting their rubbish and not throwing waste in lakes are effective solutions against water pollution. ~~Furthermore, governments should consider some training courses to teach people to stop littering, for example, they can use their authority to offer efficient courses in schools. If people learn these positive attitudes from a young age, they will learn them better, and this will have a significant impact on their future, and the environment as well.~~ Furthermore, governments should use regulations to stop industries from releasing their toxic waste into rivers and lakes. They should impose heavy fines for doing so, and even shut down factories that continue their dumping waste in such a way.

In conclusion, since water pollution has a negative impact on individuals' health and causes high expenses for governments, it has become a major concern for them. To fix the problem, people should stop littering, and governments should ~~offer training courses that have a positive impact on people's attitudes~~ set strict regulations against dumping industrial waste in rivers and lakes.

1. **Careful with linkers:** don't use too many for the same job.
2. **Careful with linkers:** pay attention to what they do and mean. Use them where they belong.
3. **Referencing:** don't use synonyms when you can use pronouns.
4. **Don't say shit that does nothing and adds nothing to the discussion.** The rule is that if shit can be deleted without any impact on the progression of ideas, it should be deleted.
5. **Careful with idea overlap:** even if you change some parts and the focus of an idea, it cannot share other parts with another idea.
