

It has been suggested that children should learn how to grow vegetables and keep animals at primary school.

Do the advantages of this outweigh the disadvantages?

Some individuals recommended ~~ed learning that children learn~~ how to grow vegetables and keep animals at their primary school. In this essay, I will outline both the benefits and drawbacks before explaining my opinion.

On the one hand, children become more ~~efficient and~~ productive. If they ~~have been~~ are taught about caring for and growing vegetables at primary school, they ~~are~~ will be able to use these skills to increase greenery in their houses and grow vegetables for their families to eat. Since their immediate and extended families can eat their products, such as, lettuce, ~~herb,~~ mint and basil, ~~children they~~ can feel a sense of achievement and become more productive, ~~and consequently, this has a big influence on their personal development~~ [This is likely to have a significant influence on their future careers, as employers usually look for more productive employee]. Furthermore, keeping animals has a significant impact on children's ~~mental and~~ physical health. They are able to keep animals, such as horses, dogs and cats, in their private environment if they have knowledge about caring for ~~animals, such as hamsters, dogs and cats~~ them. Since spending time with animals makes them calmer and more relaxed, they prefer to spend ~~quality~~ time, doing activities like walking, feeding and running with their ~~domestic~~

~~animalsthem. To illustrate, playing with their animals~~ This makes them more physically active and helps them ~~become more refreshed~~ avoid obesity and high blood pressure as adults.

On the other hand, children waste water if they grow vegetables. ~~Increasing greenery~~ Growing vegetables needs lots of ~~waterit~~. Since ~~children they~~ may not know how to save ~~waterit~~, they may use too much ~~water~~. In addition, keeping animals costs a lot of money. ~~Animals They~~ need food, vaccines, toys and cleaning equipment. ~~Since children put a lot of pressure on their parents to buy a variety of things, parents are not able to curb their spending. Since buying these requires huge budgets, school will be left with less money for more important tasks, such as paying teacher's salaries and cleaning.~~

~~In conclusion,~~ I believe that parents ~~should~~ can teach their children how to use water properly and avoid wasting it, and they ~~should~~ can make some strict rules for animal-related expenses. ~~In my opinion, becoming more productive in their lives and improving their mental health play an essential role in children's future and their personal developments. Therefore, I believe the benefits of teaching primary school children how to grow vegetables and keep animals outweigh the drawbacks./Therefore, I believe teaching primary school children how to grow vegetables and keep animals allows them to become more productive and physically healthy, which are very beneficial.~~
