

CA: Some people love to touch paper, hold books in hand, highlight with pen, add notes with pencil

Refute/Solution: cutting-edge tech becoming very real > future: feel no difference

Some may argue that people can touch paper, hold printed books, highlight text with a pen and write notes with a pencil, but I think cutting-edge technology is becoming so real that **this issue can be ironed out through up-to-the-minute devices' features.**

You need to follow your notes in the writing phase. Failure to do so can cause TR and CC problems that affect your score:

... so real that they will not feel the difference.

Task:

In the future, nobody will buy printed newspapers or books because they will be able to read everything they want online without paying. To what extent do you agree or disagree with this statement?

Introduction:

It is said that nobody will purchase printed books or newspapers in the future, thanks to being able to access the online version of anything they want to read for free. I strongly believe that this will occur in the near future mainly for environmental reasons.

Main ideas:

Environmental problems

Income from ads more than sales

Future readers not used to using prints

Therefore, I believe that ~~this development will take place in the future, and~~ people will have access to online-free online resources and nobody will buy printed books and newspapers.

Commented [ET1]: 1.This is the same development you have explained in the rest of this sentence.
2.THIS DEVELOPMENT has no close reference. When you use THIS, the reference must be close by.
