In the future, nobody will buy printed newspapers or books because they will be able to read everything they want online without paying.

To what extent do you agree or disagree with this statement?

Disagree:

lack of security of online data in online platforms : due to technical malfunctions, cyberattacks such as viruses or hacking> online information may become inaccessible or be lost> having access to physical copies of information is essential in such situations.

- *Reliability is the actual idea you are talking about. Technical malfunction are not security issues. You use them along with security threats to reach the conclusion that online systems are unreliable.*

---

people will continue to buy printed books and newspapers in the future because of their reading habits.

Printed books have been the primary mode of documentation of course materials since the advent of structured schooling > from the past to the present, students have dealt with printed books at school and home, and turning the pages of books and touching them have become part of their reading habits> As a result, they may find printed books more familiar and comfortable to read than e-books, even when digital versions are available for free. => Future: these individuals unwilling to look at a screen for long hours> still prefer printed books because changing their established reading habits is not easy> demand for such books will not disappear completely.

- *This does not seem very relevant to the ideas before/after it.*
- *This is a reason for the part BEFORE it, so you must place it before that part, not after it.*

Better reading experience: No distractions (like social media notifications) -> disconnect from daily life and news -> focus more on the printed book -> become more immersed in the story.

- *You should probably explain why people in the future will need to disconnect from daily life.*

~~I don't believe that~~, cause even if everything goes online, there still will be people who enjoys do things in an old way.

A clear of this is elderly people, who may struggle to learn new ways of doing things .

- *This does not exemplify or explain the idea before it. It is also irrelevant because older people TODAY struggle with technologies that weren't available when they were younger. However, we are talking about the future when we or our descendants will be the elderly and the technology in question will no longer be new.*

Health problems: More technological advances in the future > Most daily tasks become electronic > People will need to use computers for many tasks including reading > More screen time and exposure to electronic devices > Eye strain and possible eye problems > Negative effects on human health

- *Great reasoning, but there are no relevant conclusions at the end. You need to link this to a conclusion about the task, e.g.* ***→ people will avoid screens when not necessary → read on paper***

Some people won't able to use modern gadgets : don't have enough information about using modern technology like elderly people > don't have enough money to have own device to connect to the internet > some people struggle to break habits.

- *See my notes on elderly people above.*
- *Not the result of the previous idea: this must be linked using a slash (/) or OR to put it in the same level as the previous idea.*
- *You cannot reach this conclusion from the reasons given before it. You did not discuss habits. You talked about people* ***not being able to*** *read online because of their limitations.*

Publishers won't allow this

Now: publishers make money by printing books/newspapers > the only way for them to make a living > have to sell prints > if people read online: publishers lose jobs > publishers set more strict copyrights > people won't read everything online without paying

- *Considering what you have written at the end, this part should be deleted: al you need to say here is that they have to sell.*
- *You need to add "for free" after this to make the reasoning work coherently.*

Some people will continue to prefer printed book. Reading on electronic devices cause eye strain> physical book more comfortable=>. buy printed book

some people more concentrate better> buy printed books

- This needs to be explained. Why do they concentrate better with printes?

---

some people may continue to buy printed newspapers or books as they prefer physical ones>>>they can keep them in their personal library>>> + keep the book in their hands & highlight/undreline important notes>>>printed stuff may be appealing for them>>>they pay for printed newspapers and books >>even if/while online ones are freely available

- *You can do these with electronic versions too. You need to look at the differences between them.*

they cannot focus on reading because they receive notification and cannot concentrate on subject

- *Too small. You need to add examples and structure the reasoning.*
